

**School Leaders Informing Policy Poll Results**  
**Feb. 9, 2021**

Schools are currently not designed, or do not have the resources, to provide the full range of student supports needed to respond to the impacts of the pandemic and longstanding inequities, at the scale and intensity required.

How useful would additional student supports in these areas be in your school next year?

Policy Idea Under Consideration: Provide school/districts with a menu of evidence-based student supports to which federal funds could be applied; Provide funding so schools could partner with an organizing partner. In your context, would this work?
